

ADEBOYE A. DANIEL

Senior ML/AI Engineer | Python, MLOPs/AIOPs, Agentic System

adeboye.daniel17@gmail.com | +2348051182401 | <https://www.linkedin.com/in/daniel-adeboye>

EXPERIENCE

Escrow-Tech – Lead Machine Learning Engineer – Bristol, United Kingdom

May 2024 – Present

- Architected and deployed a multi-agent system with graph workflows.
- Built user behaviour constraint-solving decision multi-agent agents with reinforcement learning by feedback under real-world conditions.
- Improved the text recognition accuracy for the internal models used for extracting users' information from various documents, which significantly reduced downtime in service delivery.
- Developed and maintained CI/CD pipelines for AI model deployment, enabling rapid, reliable iteration across the ML stack with zero-downtime releases.
- Led and mentored the AI team, translating research objectives into scalable engineering deliverables with measurable business outcomes.

Polar Frequency – Senior AI Engineer – Dubai, UAE

Jan 2024 – May 2024

- Designed and developed Goghr.ai, a generative AI platform for managing recruitment processes.
- Designed and implemented a personalised chat service (recruiters and candidates) with real-time audio-to-text synchronisation.
- Built a real-time conversational AI agent with audio-to-text synchronisation, delivering low-latency, reliable performance at scale.
- Integrated formal verification into a video-based AI assessment pipeline, guaranteeing the correctness of agent decisions.
- Defined scalable infrastructure and architecture standards for AI OPs in collaboration with the operations team.

CloudClinic – Machine Learning Engineer – Lagos, Nigeria

Jan 2023 – Dec 2023

- Developed a robust retrieval algorithm for matching patients to healthcare providers based on their queries and data.
- Improved the contextual awareness of CloudClinic's AI clinical assistants for real-time appointment booking and consultation note-taking.

- Designed a robust and secure patient data infrastructure and deep learning-based search algorithms to ensure efficient, accurate access to patient records.
- Architected a secure and searchable patient data infrastructure, gaining practical experience in handling sensitive medical data under privacy constraints.

Stealth Startup – Machine Learning Engineer – Bradford, United Kingdom

Mar 2022 – Dec 2022

- Developed deep learning algorithms for real-time emotion recognition from facial expressions.
- Contributed to integrating the algorithm into a music streaming platform to enhance the user experience.
- The result of my research significantly reduced the costs of model deployment by 60 per cent

SKILLS

Programming Languages: Python, C/C++, Rust

Frameworks: Pytorch, Tensorflow, Langchain, Langgraph

EDUCATION

University of Abuja – Bachelor of Engineering in Electrical Engineering – Abuja, Nigeria

Dec 2016 – Mar 2022

Final Grade: First Class Honours (4.69/5.00)

Thesis: Human activity recognition in wearables using random forest feature selection to reduce computational cost.

PROFESSIONAL LEADERSHIP

Mentor, Black in AI. *Jan 2024 – Present*

Mentor, Society for AI Advancement, *Aug 2025 – Present*

AWARDS & SCHOLARSHIP

Emerging Leaders in AI Cohort member, Black in AI. *Dec 2024*

Dean's List from the Faculty of Engineering. *Jan 2017 – Dec 2021*

University's Scholars Recognition Award, 25th Convocation, University of Abuja. *Mar 2022*

Best Graduating Student, Department of Electrical Engineering. *Mar 2022*

Undergraduate Research Scholar, Centre for Undergraduate Research. *Jun 2021*
